

Service

Solutions

Satisfaction

If You Buy or Sell Buildings.....we can help you answer questions.....as we have done for others

Residential

Commercial

MICHAUD
engineering

1. Comprehensive Inspections

No “check-lists” here - we provide a comprehensive inspection and a report written in plain language so that you can make the best informed decision.

2. Residential and Commercial Buildings

Residential and commercial buildings are constructed very differently, but we have the experience to inspect and provide a variety of services for each.

3. Professional Engineering Background

Licensed engineers have extensive training and we combine that with years of related experience to provide you with the best information for your needs.

4. Locally Owned

Locally owned means an understanding of your needs and prompt service

Michaud Engineering Inc.

People

We have the expertise.....to provide the guidance delivering.....quality inspections for you

President

Robert S. Michaud, P.E., a Mechanical Engineer from Clarkson University who holds Professional Engineering licenses in Maine, Vermont and Florida. He has been involved in industrial and commercial mechanical project engineering and management since 1990. Michaud Engineering has extensive experience in:

- Operations and maintenance of building systems
 - Engineering, project management, maintenance and capital projects for industrial clients including pharmaceutical manufacturing, pulp and paper
- Developing and implementing CMMS systems including Datastream's MP2, Maximo, and Corrigo.
- Building and equipment inspection and assessment for repair, maintenance and capital expenditures

At Michaud Engineering we work in cooperation with many companies to provide the right service, solution and satisfaction. We can bring one of our partners or work with a firm or software already providing part of the service.

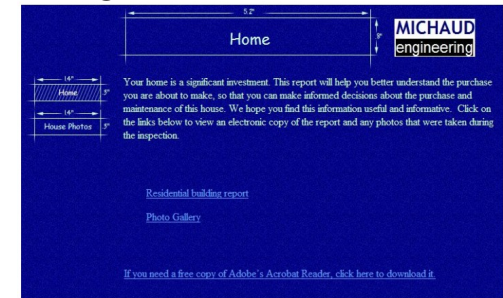

Process

The inspection process involves a thorough, on site, visual inspection of the interior, exterior and site, the gathering of information, and an analysis of the structure and its components. Where possible, systems are tested for proper functionality such as the branch wiring and domestic water system. Finally the detailed report is written with recommendations highlighted.

Product

In addition to providing a detailed written report in a narrative format, clients receive electronic copies of the report with photos in an easy to navigate website format.
